
BUSINESS PERFORMANCE ANALYSIS

Prepared by : **Abdallahman Elshafei**

Data Analyst

Date : 4/10/2026

Executive Summary:

This report analyzes sales, customer behavior, and product performance. The analysis identified top-performing products, key customer segments, and seasonal sales trends. Several opportunities were found to improve revenue and customer retention.

Scope:

- Sales Performance
- Product Performance
- Customer Analysis
- Customer Behavior
- Key Business Insights

Data Sources:

- The analysis was conducted using three main tables:
- Customer Table — Contains customer demographic and identifying information.
- Products Table — Contains product details, categories, subcategories, and costs.
- Sales Table — Contains sales transactions, order dates, quantities, and sales amounts.

Key Business Metrics:

Measure_Name	Measure_Value
Total Sales	29,356,250
Total Quantity	60,423
Total Orders	27,659
Average Price	486
Total Customers	18,484
Total Products	295

Business Questions & Analysis:

1. How has sales performance changed over time?

Insight:

Sales showed an overall upward trend, with some monthly fluctuations. Monthly sales reached their **highest level** in **December** at **3.21M**, while February recorded the **lowest** at **1.74M**. At the annual level, **2013** achieved the **highest** sales at **16.34M**. However, **2010** and **2014** contain data for only **one month**, so their annual sales are not directly comparable with the other years.

Recommendation:

The business should investigate the factors behind the strong sales performance in the later months and in **2013**, then identify which successful strategies can be applied during lower-performing periods to sustain and improve sales.

2. Which product categories contribute the most to total sales?

Insight:

The sales portfolio is **highly** concentrated in the **Bikes category**, which contributes **96.46%** of total sales (**28.32M**). Accessories and Clothing contribute only **2.39%** and **1.16%**, respectively.

Recommendation:

The business should continue supporting the **Bikes category** as its primary revenue driver, but relying too heavily on a single category creates a **business risk**. Any decline in **Bikes** demand, changes in customer preferences, supply issues, or increased competition could significantly impact total sales. Therefore, the business should also focus on growing **Accessories** and **Clothing** through cross-selling, bundled offers, and targeted promotions to diversify revenue and reduce dependency on **Bikes**.

3. Which products generate the highest revenue?**Insight:**

The **top five products** by revenue are all variants of the **Mountain-200** model, with sales ranging from **1.29M** to **1.37M**. This indicates that the **Mountain-200** model is a **strong** revenue contributor across different sizes and colors.

Recommendation:

The business should maintain the availability of the **Mountain-200** variants and analyze what factors are driving their **strong** performance. The company can also use the performance of these variants as a reference when evaluating or promoting similar products, while ensuring sufficient stock of the best-performing sizes and colors.

4. Which products are underperforming?

Insight:

The **five lowest-revenue products** generate significantly **lower** sales compared with the top-performing products. **Racing Socks - L** and **Racing Socks - M** record the lowest revenue at only **2.43K and 2.68K**, respectively.

Recommendation:

The business should investigate the reasons behind the low performance of these products, such as demand, pricing, product visibility, or inventory availability. Depending on the findings, the business can consider targeted promotions, cross-selling these products with higher-selling items, or reviewing their product strategy.

5. How are customers distributed across different segments?

Insight:

The customer base is heavily concentrated in the New segment, which represents approximately **79.2%** of all customers. **Regular** customers account for **11.9%**, while **VIP** customers represent only **9.0%**.

Recommendation:

The business should focus on converting New customers into Regular and VIP customers by encouraging **repeat** purchases and **building** long-term customer relationships. Retention campaigns, personalized offers, and **loyalty** programs could help increase customer repeat purchases and grow the share of higher-value customer segments.

6. Who are the highest-value customers?**Insight:**

The **top 10 customers** generate a combined revenue of **132.02K**, representing only **0.45%** of total sales. Their individual revenue levels are also very similar, ranging from **12.91K** to **13.29K**. This indicates that overall sales are **not highly** dependent on a small number of **customers**.

Recommendation:

The business should continue retaining these high-value customers through personalized offers and loyalty programs. At the same time, since **the top 10 customers** represent **only a small share** of total sales, the business should focus on **increasing** the value of the broader customer base by encouraging repeat purchases and improving customer retention.
